# Netzwerkabdeckung

Messeinrichtungen auf  
wissenschaftlichen und  
öffentlichen Fähren auf der  
Kieler Förde

Netzqualität - Betreiber 1

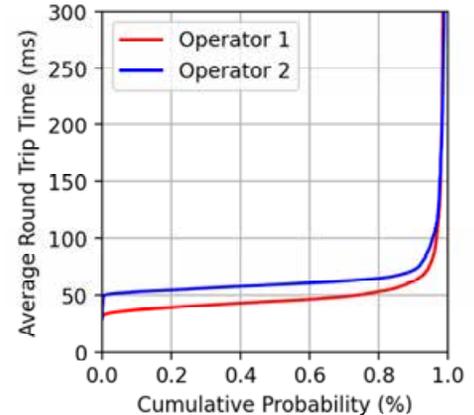

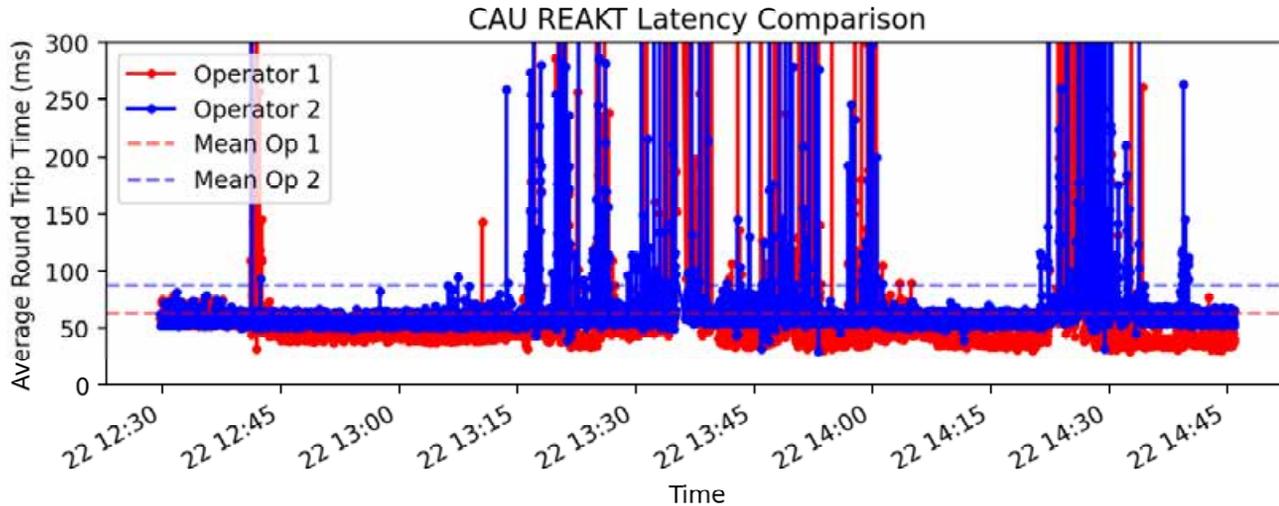

5G Abdeckung - 60%  
4G+5G Abdeckung - 97,7%

Netzqualität - Betreiber 2

5G Abdeckung - 65%  
4G+5G Abdeckung - 99,8%

# Latenzmessungen

## Durchschnitt

- Betreiber 1 – 63 ms Latenz
- Betreiber 2 – 87 ms Latenz
- Unter 100 ms Gesamtlatenz

## Worst case

- 98% der Zeit unter 300 ms Latenz
- 99.7% der Zeit unter 1 s Latenz

### On-Demand APP

- Easy way to order trains to any location
- Helping with navigation
- Entry/Exit location via GPS or predefined list
- Live updates for train location

### AI-Vision-based Obstacle Detection

- Obstacles & rail are recognized and marked by AI
- Safety score calculated based on distance, movement direction and location

### Remote Control

- Intervening in case of an emergency
- Control of speed and brakes
- UI via Website
- Take/release control
- Integrated camera live-stream

### The REAKTOR Prototype

The REAKT initiative aims to reactivate abandoned railway lines by developing autonomous on-demand traffic. The theses in this project evolve around the goal to develop a first prototype of such a rail vehicle, namely the REAKTOR. It will be built in 1:32 scale and full scale for the REAKT track between Malente and Lütenberg.

### The Team

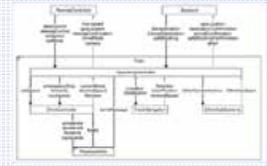

- |                  |                  |
|------------------|------------------|
| <b>Students:</b> | <b>Advisors:</b> |
| Kevin Eßben      | Alexander Schulz |
| Lorenz Tiedemann | Oliver Göttsche  |
| Ng Rainbow       | Jette Pätzold    |
| Simon Jungersen  | Moritz Ali       |
| Rasmus Jansen    | Birkin Denzer    |

### Simulation & Digital Twin

- Virtual replica of REAKT track
- Mirroring real-world vehicles
- Simulating vehicles as a model of operation
- Providing a virtual test environment
- Made with Unreal Engine 5

### Safe Controller

- Safe control of a passenger train and exchange of passengers
- Risk analysis using System-Theoretic Process Analysis (STPA)
- Operating Controller handling autonomous decisions
- Drive Controller: executing commands on physical train
